Contemporary approaches to aviation safety show a dynamic endeavour to identify a variety of components that minimize the emergence of adverse situations. In this process there has always been a strong interrelation between these components and it allows us to talk about a chain of safety. This volume presents the most recent efforts in this chain of safety streaming from both the industry and academia, as well as the future challenges for operational settings.

**Contents:**
- Introduction: mechanisms in the chain of safety, Alex de Voogt; GAP: assessment of performance in teams – a new attempt to increase validity, Viktor Oubaid, Frank Zinn and Daniela Gundert; The importance of prospective memory for the selection of air traffic controllers, Alex J. Uyttendale and Alex de Voogt; Analysis of learning curves in on-the-job training, Esther Oprins, Ernst Burggraaff and Robert A. Roe; How cockpit crews successfully cope with high task demands, Ruth Haeusler, Ernst Hermann, Nadine Bienefeld and Norbert Semmer; Manual flying skill decay: evaluating objective performance measures, Matt Ebbatson, Don Harris, John Huddleston and Rodney Sears; Civil pilots’ stress and coping behaviors: a comparison between Taiwanese and non-Taiwanese aviators, Chiang-Fang G. Cherng, Jian Shiu and Te-Sheng Wen; Anticipatory processes in critical flight situations, K. Wolfgang Kallas; Error detection during normal flight operations: resilient systems in practice, Matthew J.W. Thomas and Renee M. Petrilli; The role of GPS in aviation incidents and accidents, Gemma Stanski-Pacis and Alex de Voogt; Creating safer systems: PIRATe (the proactive integrated risk assessment technique), Brenton Hayward, Andrew Love and Kate Branford; Safety reporting system as a foundation for a safety culture, Teresa C. D’Oliveira; Conclusions: extending the chain, Teresa C. D’Oliveira; Indexes. Includes 46 b&w illustrations
