

lum; base of scutellum and a mark on commissural margin of corium croceous; elytra minutely and obscurely dotted with croceous; apical margin of cuneus with a few black scales; membrane whitish hyaline or very faintly, uniformly fuliginous, its veins whitish; apex of hind femora very minutely speckled with brown, the tibiæ with small brown dots at base of the white bristles; antennæ becoming brownish toward apex. Upper surface clothed with soft white hairs.

Described from one male and three females taken on San Esteban Island, April 19, and one female taken at Angeles Bay, May 4.

Type: Male, No. 1037, and *allotype*, female, No. 1038, Mus. Calif. Acad. Sci., collected April 19, 1921, on **San Esteban Island, Gulf of California**.

130. *Psallus tuberculatus* Van Duzee, new species

Allied to *aspersus*, pale green without irrorations; membrane fusco-marmorate; male genital segment with a lateral tubercle. Length 3 mm.

Male: Head and pronotum short and broad as in *aspersus* and *gregalis* but narrower and more parallel-sided; head with eyes two thirds the basal width of pronotum; costal margins of elytra very feebly arcuated. Segment I of antennæ very short but attaining apex of head; II as thick as I and as long as basal width of pronotum; III and IV together three fourths of II. Sinistral clasper broad and short, unarmed; dextral linear, curved, blunt at apex; dorsal margin of genital segment armed with an erect tubercle.

Color, pale green, clothed with minute white pubescence; base of scutellum and head tinged with dull fulvous; membrane confluent marmorate with fuscous, more so toward apex, the base mostly white-hyaline, nervures pale with a fuscous line at base of radial; femora dotted with fuscous nearly to their base; tibiæ with small fuscous points at base of the brown bristles.

Described from five males taken on mesquite at San Nicolas Bay, May 16; three males and three females from Puerto Ballandra, Carmen Island, May 22, also from mesquite.

Type: Male, No. 1039, Mus. Calif. Acad. Sci., collected May 16, 1921, at **San Nicolas Bay, Lower California**. *Allotype*, female, No. 1040, collected May 22, 1921, at Puerto Ballandra, Carmen Island, Gulf of California.

131. *Plagiognathus pictipes* Van Duzee

Agua Verde, May 26, abundant on *Atriplex*; Escondido Bay, June 14.
