

NOTES ON SOME CORSICAN INSECTS,

BY THE REV. T. A. MARSHALL, M.A., F.L.S.

(Continued from Vol. vii, p. 250.)

[WITH DESCRIPTIONS OF NEW GENERA AND SPECIES OF *HEMIPTERA*
BY JOHN SCOTT.]

(Concluded from p. 195).

Genus.—AGALLIASTES, Fieb.

AGALLIASTES OCHRACEUS, Scott, *sp. n.*

Ochraceous; sometimes slightly dusky and clothed with semi-depressed black hairs.

Head pale brownish-yellow; *antennæ* yellow, first joint, except the apex and second joint at the base, black.

Thorax: *pronotum* and *scutellum* ochraceous or slightly dusky; *elytra* ochraceous or slightly dusky; *membrane* brownish, the large cell, a patch below the apex of the cuneus, and the outer margin of the cells, slightly darker; *cell-nerves* ochraceous, lesser *cell-nerves* orange-red; *sternum* ochraceous; *legs* deep yellow; *thighs*, first pair along the lower margin with four or five minute black spots, from each of which projects a long black hair, second and third pairs each with a single black spot on the lower margin a little before the apex, upper margin of all the pairs at the apex with two black spots; *tibiæ* with black spots and erect, stout, somewhat spinose, black hairs; *tarsi* pale brown, apex of the third joint broadly black.

Abdomen, underneath more or less brown; genital segments dusky ochraceous.

Length, 1—1½ line.

AGALLIASTES UNICOLOR, Scott, *sp. n.*

Minute, green; clothed with semi-erect pale hairs; thighs unpunctured.

Head: *crown*, anterior margin, viewed from above, elliptic; *antennæ* brownish, basal joint green; *eyes* dark brown; *rostrum* green, apex black.

Thorax: *pronotum* and *scutellum* green, the latter with a somewhat deep and narrow, triangular depression at the base; *elytra* green; *membrans* fuscous-black, between the apex of the cuneus and the inner nerve a white triangular patch; *cell-nerves* pale; *sternum* green; *legs* green; *tibiæ* unpunctured, and with long, erect, spinose, black hairs; *tarsi* pale brown, apex of the third joint blackish.

Abdomen, underneath green.

Length, ¾ line.

This is the only *green* species of the genus with which I am acquainted. The insects are not in good condition, and, besides, have faded much in colour.

Family SALDIDÆ.

Genus SALDA, Fab.

SALDA VENUSTULA, Scott, *sp. n.*

Black, somewhat sparingly clothed with erect, fine black hairs.
